Protection Plus™, manufactured by Environmental Plant Management (EPM), is a natural, broad-spectrum insecticide/miticide free of all harmful chemicals making it safe to use during all growth stages.

As such, it is important to follow specific directions to achieve our 3rd party, lab-proven efficacy. For a comprehensive guide, review our [SOP on our website](#).

Directions

1. Root Zone water flush (until runoff) recommended before application. Wait 1 hour after flush to apply diluted mixture.
2. AGITATE bottle BEFORE diluting.
3. Dilute 2oz per gallon (standard strength) or 4oz per gallon (extra strength) with water.
4. Agitate diluted mixture. Use diluted mixture within 1 hour. Natural ingredients will settle to the bottom after 1 hour and will require you to re-agitate.
5. For optimal results, apply with water and air temperature at 82°F
6. Protection Plus™ is a contact killer. Fully coat leaf, stem, under canopy, and soil to a slight runoff.
7. Follow the chart below for application timing.
8. Do not store below 32°F or above 120°F

Foliar Spray

Spray when transpiration levels are their lowest (beginning of day or 2 hours after lights off).

Root Drench

Apply during dark period.

	WEEK						
	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7
CURATIVE - AGGRESSIVE	3x*	1x	1x	1x			1x**
CURATIVE - STANDARD	1x			1x			1x**
PREVENTATIVE (IPM)	1x						

*Allow to dry between applications

**Repeat every 3 days until pressures resolved
